

Section 4.1: Linear functions and their properties

# 1 – 10: Find the following:

- a) slope
- b) y-intercept
- c) x-intercept (if any)
- d) sketch a graph
- e) Determine the interval(s) where the graph is increasing, decreasing or constant.

1)  $f(x) = 3x - 6$

2)  $f(x) = 2x - 10$

3)  $g(x) = -2x - 8$

4)  $g(x) = -4x - 8$

5)  $f(x) = 7$

6)  $f(x) = -2$

7)  $g(x) = \frac{2}{3}x - 4$

8)  $g(x) = \frac{3}{4}x - 6$

9)  $f(x) = \frac{-x}{4} + 2$

10)  $f(x) = \frac{-x}{3} + 1$

11) Suppose  $f(x) = 3x - 6$  and  $g(x) = -2x + 4$

- a) Solve  $f(x) = 0$
- b) Solve  $f(x) > 0$
- c) Solve  $f(x) = g(x)$
- d) Solve  $f(x) < g(x)$

12) Suppose  $f(x) = -3x - 2$  and  $g(x) = -2x + 8$

- a) Solve  $f(x) = 0$
- b) Solve  $f(x) > 0$
- c) Solve  $f(x) = g(x)$
- d) Solve  $f(x) < g(x)$

13) Suppose  $f(x) = x - 3$  and  $g(x) = 2x + 4$

- a) Solve  $f(x) = 0$
- b) Solve  $f(x) > 0$
- c) Solve  $f(x) = g(x)$
- d) Solve  $f(x) < g(x)$

14) Suppose  $f(x) = 3x - 6$  and  $g(x) = 4x + 4$

- a) Solve  $f(x) = 0$
- b) Solve  $f(x) > 0$
- c) Solve  $f(x) = g(x)$
- d) Solve  $f(x) < g(x)$

#15-20:

- Create a scatter plot of the data.
- Determine whether the given function is linear or nonlinear.
- If the function is linear, determine the equation of the line. (Write your answer using function notation)

15)	16)																												
<table border="1"><thead><tr><th>x</th><th>y = f(x)</th></tr></thead><tbody><tr><td>1</td><td>2</td></tr><tr><td>2</td><td>4</td></tr><tr><td>3</td><td>6</td></tr><tr><td>4</td><td>8</td></tr><tr><td>5</td><td>10</td></tr><tr><td>6</td><td>12</td></tr></tbody></table>	x	y = f(x)	1	2	2	4	3	6	4	8	5	10	6	12	<table border="1"><thead><tr><th>x</th><th>y = f(x)</th></tr></thead><tbody><tr><td>1</td><td>3</td></tr><tr><td>2</td><td>6</td></tr><tr><td>3</td><td>9</td></tr><tr><td>4</td><td>12</td></tr><tr><td>5</td><td>15</td></tr><tr><td>6</td><td>18</td></tr></tbody></table>	x	y = f(x)	1	3	2	6	3	9	4	12	5	15	6	18

21) Suppose that the number of a units of a certain product that will be supplied (S) at price (p) (in dollars) is given by the equation:

$$S(p) = 2p - 10$$

Suppose that number of units of the same product that will be demanded (D) at price (p) (in dollars) is given by the equation:

$$D(p) = -2p + 20$$

- How many units of the product will be supplied at a price of \$8?
- How many units of the product will be demanded at a price of \$8?
- At a price of \$8 does the supply exceed demand, or does demand exceed supply?
- Find the equilibrium price.
- How many units of the product will be supplied at the equilibrium price?
- How many units of the product will be demanded at the equilibrium price?

22) Suppose that the number of a units of a certain product that will be supplied ( $S$ ) at price ( $p$ ) (in dollars) is given by the equation:

$$S(p) = 3p - 2$$

Suppose that number of units of the same product that will be demanded ( $D$ ) at price ( $p$ ) (in dollars) is given by the equation:

$$D(p) = -4p + 12$$

- a) How many units of the product will be supplied at a price of \$1?
- b) How many units of the product will be demanded at a price of \$1?
- c) At a price of \$1 does the supply exceed demand, or does demand exceed supply?
- d) Find the equilibrium price.
- e) How many units of the product will be supplied at the equilibrium price?
- f) How many units of the product will be demanded at the equilibrium price?

23) Suppose that the number of a units of a certain product that will be supplied ( $S$ ) at price ( $p$ ) (in dollars) is given by the equation:

$$S(p) = 5p - 40$$

Suppose that number of units of the same product that will be demanded ( $D$ ) at price ( $p$ ) (in dollars) is given by the equation:

$$D(p) = -3p + 40$$

- a) How many units of the product will be supplied at a price of \$9?
- b) How many units of the product will be demanded at a price of \$9?
- c) At a price of \$9 does the supply exceed demand, or does demand exceed supply?
- d) Find the equilibrium price.
- e) How many units of the product will be supplied at the equilibrium price?
- f) How many units of the product will be demanded at the equilibrium price?

24) Suppose that the number of a units of a certain product that will be supplied (S) at price (p) (in dollars) is given by the equation:

$$S(p) = 5p - 12$$

Suppose that number of units of the same product that will be demanded (D) at price (p) (in dollars) is given by the equation:

$$D(p) = -2p + 16$$

- a) How many units of the product will be supplied at a price of \$3?
- b) How many units of the product will be demanded at a price of \$3?
- c) At a price of \$3 does the supply exceed demand, or does demand exceed supply?
- d) Find the equilibrium price.
- e) How many units of the product will be supplied at the equilibrium price?
- f) How many units of the product will be demanded at the equilibrium price?

25) A company makes a single product. The monthly cost (C) to make x units of the product can be found using the cost equation:

$$C(x) = 3x + 100$$

The monthly revenue (R) earned from selling x units of the product can be found using the revenue equation:

$$R(x) = 8x$$

- a) Find the cost of making 30 units of the product during a month.
- b) Find the monthly revenue earned by selling 30 units of the product.
- c) Is there a profit or loss when 30 units of the product are produced and sold in a month?
- d) What is the amount of the profit or loss?
- e) Find the break-even quantity.
- f) What is the monthly cost at the break-even quantity?
- g) What is the monthly revenue at the break-even quantity?
- h) What is the monthly profit at the break-even quantity?

26) A company makes a single product. The monthly cost (C) to make  $x$  units of the product can be found using the cost equation:

$$C(x) = 2x + 150$$

The monthly revenue (R) earned from selling  $x$  units of the product can be found using the revenue equation:

$$R(x) = 4x$$

- a) Find the cost of making 40 units of the product during a month.
- b) Find the monthly revenue earned by selling 40 units of the product.
- c) Is there a profit or loss when 40 units of the product are produced and sold in a month?
- d) What is the amount of the profit or loss?
- e) Find the break-even quantity.
- f) What is the monthly cost at the break-even quantity?
- g) What is the monthly revenue at the break-even quantity?
- h) What is the monthly profit at the break-even quantity?

27) A company makes a single product. The monthly cost (C) to make  $x$  units of the product can be found using the cost equation:

$$C(x) = 5x + 400$$

The monthly revenue (R) earned from selling  $x$  units of the product can be found using the revenue equation:

$$R(x) = 7x$$

- a) Find the cost of making 100 units of the product during a month.
- b) Find the monthly revenue earned by selling 100 units of the product.
- c) Is there a profit or loss when 1000 units of the product are produced and sold in a month?
- d) What is the amount of the profit or loss?
- e) Find the break-even quantity.
- f) What is the monthly cost at the break-even quantity?
- g) What is the monthly revenue at the break-even quantity?
- h) What is the monthly profit at the break-even quantity?

28) A company makes a single product. The monthly cost (C) to make x units of the product can be found using the cost equation:

$$C(x) = 4x + 300$$

The monthly revenue (R) earned from selling x units of the product can be found using the revenue equation:

$$R(x) = 10x$$

- a) Find the cost of making 60 units of the product during a month.
- b) Find the monthly revenue earned by selling 60 units of the product.
- c) Is there a profit or loss when 60 units of the product are produced and sold in a month?
- d) What is the amount of the profit or loss?
- e) Find the break-even quantity.
- f) What is the monthly cost at the break-even quantity?
- g) What is the monthly revenue at the break-even quantity?
- h) What is the monthly profit at the break-even quantity?

29) U-Haul charges \$25 per day plus 25 cents for each mile driven to rent a certain truck.

- a) Create a linear function that models the cost of renting a truck for one day when "m" miles are driven.
- b) What is the cost of renting the truck for one day if it is driven 100 miles?
- c) Suppose the cost of renting a truck for 1 day is \$75. How many miles were driven?

30) U-Haul charges \$30 per day plus 75 cents for each mile driven to rent a certain truck.

- a) Create a linear function that models the cost of renting a truck for one day when "m" miles are driven.
- b) What is the cost of renting the truck for one day if it is driven 200 miles?
- c) Suppose the cost of renting a truck for 1 day is \$105. How many miles were driven?

31) U-Haul charges \$20 per day plus 50 cents for each mile driven to rent a certain truck.

- a) Create a linear function that models the cost of renting a truck for one day when "m" miles are driven.
- b) What is the cost of renting the truck for one day if it is driven 80 miles?
- c) Suppose the cost of renting a truck for 1 day is \$35. How many miles were driven?

32) U-Haul charges \$40 per day plus 70 cents for each mile driven to rent a certain truck.

- a) Create a linear function that models the cost of renting a truck for one day when "m" miles are driven.
- b) What is the cost of renting the truck for one day if it is driven 100 miles?
- c) Suppose the cost of renting a truck for 1 day is \$75. How many miles were driven?
