1) What is the pH of a solution containing $0.30 \mathrm{M} \mathrm{NH}_{3}$ and $0.15 \mathrm{M} \mathrm{NH}_{4} \mathrm{NO}_{3}$ ?
$\mathrm{K}_{\mathrm{b}}$ for $\mathrm{NH}_{3}=1.8 \times 10^{-5}$
$\mathrm{NH}_{3}$ is a weak base: $\mathrm{NH}_{3}+\mathrm{H}_{2} \mathrm{O} \rightleftharpoons \mathrm{NH}_{4}^{+}+\mathrm{OH}^{-}$
$\mathrm{NH}_{4} \mathrm{NO}_{3}$ is a salt: $\mathrm{NH}_{4} \mathrm{NO}_{3} \rightarrow \mathrm{NH}_{4}^{+}+\mathrm{NO}_{3}^{-}$; thus $\mathrm{NH}_{4}^{+}$is a "common ion"
$\mathrm{NH}_{3}+\mathrm{H}_{2} \mathrm{O} \rightleftharpoons \mathrm{NH}_{4}^{+}+\mathrm{OH}^{-}$

$x=\left[\mathrm{OH}^{-}\right]=3.6 \times 10^{-5} \mathrm{M}$
$\mathrm{pOH}=-\log 3.6 \times 10^{-5}=4.44$
