## VSEPR Theory (Molecular Shapes)

$$
A=\text { the central atom, } X=\text { an atom bonded to } A, E=a \text { lone pair on } A
$$

Note: There are lone pairs on X or other atoms, but we don't care. We are interested in only the electron densities or domains around atom A .

| Total Domains | Generic Formula | Picture | Bonded Atoms | Lone Pairs | Molecular Shape | Electron Geometry | Example | Hybridi -zation | Bond Angles |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | AX | A-X | 1 | 0 | Linear | Linear | $\mathrm{H}_{2}$ | S | 180 |
| 2 | $\mathrm{AX}_{2}$ | $x-A-x$ | 2 | 0 | Linear | Linear | $\mathrm{CO}_{2}$ | sp | 180 |
|  | AXE |  | 1 | 1 | Linear | Linear | $\mathrm{CN}^{-}$ |  |  |
| 3 | $\mathrm{AX}_{3}$ |  | 3 | 0 | Trigonal planar | Trigonal planar | $\mathrm{AlBr}_{3}$ | $s p^{2}$ | 120 |
|  | $\mathrm{AX}_{2} \mathrm{E}$ | $0$ | 2 | 1 | Bent | Trigonal planar | $\mathrm{SnCl}_{2}$ |  |  |
|  | $\mathrm{AXE}_{2}$ | $x-A \rho$ | 1 | 2 | Linear | Trigonal planar | $\mathrm{O}_{2}$ |  |  |
| 4 | $\mathrm{AX}_{4}$ |  | 4 | 0 | Tetrahedral | Tetrahedral | $\mathrm{SiCl}_{4}$ | $s p^{3}$ | 109.5 |
|  | $\mathrm{AX}_{3} \mathrm{E}$ | $0$ | 3 | 1 | Trigonal pyramid | Tetrahedral | $\mathrm{PH}_{3}$ |  |  |
|  | $\mathrm{AX}_{2} \mathrm{E}_{2}$ |  | 2 | 2 | Bent | Tetrahedral | $\mathrm{SeBr}_{2}$ |  |  |
|  | $\mathrm{AXE}_{3}$ |  | 1 | 3 | Linear | Tetrahedral | $\mathrm{Cl}_{2}$ |  |  |

| Total Domains | Generic Formula | Picture | Bonded Atoms | Lone Pairs | Molecular Shape | Electron Geometry | Example | Hybridi -zation | Bond Angles |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 5 | $\mathrm{AX}_{5}$ |  | 5 | 0 | Trigonal bipyramid | Trigonal bipyramid | $\mathrm{AsF}_{5}$ | $s p^{3} \mathrm{~d}$ | $\begin{gathered} 90 \\ \text { and } \\ 120 \end{gathered}$ |
|  | $\mathrm{AX}_{4} \mathrm{E}$ |  | 4 | 1 | See Saw | Trigonal bipyramid | $\mathrm{SeH}_{4}$ |  |  |
|  | $\mathrm{AX}_{3} \mathrm{E}_{2}$ |  | 3 | 2 | T shape | Trigonal bipyramid | $\mathrm{ICl}_{3}$ |  |  |
|  | $\mathrm{AX}_{2} \mathrm{E}_{3}$ |  | 2 | 3 | Linear | Trigonal bipyramid | $\mathrm{BrF}_{2}{ }^{-}$ |  |  |
| 6 | $\mathrm{AX}_{6}$ |  | 6 | 0 | Octahedral | Octahedral | $\mathrm{SeCl}_{6}$ | $s p^{3} d^{2}$ | 90 |
|  | $\mathrm{AX}_{5} \mathrm{E}$ |  | 5 | 1 | Square pyramid | Octahedral | $\mathrm{IF}_{5}$ |  |  |
|  | $\mathrm{AX}_{4} \mathrm{E}_{2}$ |  | 4 | 2 | Square planar | Octahedral | $\mathrm{XeF}_{4}$ |  |  |

Notes 1. There are no stable $\mathrm{AXE}_{4}, \mathrm{AX}_{3} \mathrm{E}_{3}, \mathrm{AX}_{2} \mathrm{E}_{4}$ or $\mathrm{AXE}_{5}$ molecules.
2. All bonds are represented in this table as a line whether the bond is single, double, or triple.
3. Any atom bonded to the center atom counts as one domain, even if it is bonded by a double or triple bond. Count atoms and lone pairs to determine the number of domains, do not count bonds.
4. The number of bonded atoms plus lone pairs always adds up to the total number of domains.
